

PAMCO Machine Works Celebrating 40 Years in Business.

In 2007 PAMCO Machine Works celebrated our 40th year in business! Through all those years our mission and management philosophy hasn't changed...we want you to be able to count on us for all your important machining and mechanical repair needs. Years ago many of our customers (plants, factories, mines, mills, refineries, etc.) had their own in-house machine shops full of the right kind of equipment and the right people to get the job done without using many outside resources. Today the world is very different...now most of our customers are under so much pressure to keep the production up and keep the budget down that it makes sense to team up with an expert who can handle the jobs that distract them. That's where we come in...PAMCO is both an emergency room for your equipment repairs (see above photos) and a full service machine shop that can make just about any part or fabrication your company needs. We can "reverse engineer" parts and equipment by using your worn samples and our many years of experience to remake it as good or better than it was originally. If OEM parts are still available we're probably already a major buyer to those manufacturers and have access to all the original parts required. Here are some remarks we've received from customers within the last few weeks: "Thanks for the quick response...we truly appreciate the great work as always"

And "Thanks for your help during this breakdown crisis...your people have handled this project superbly ...thank you"
